

Residential Mortgage Disclosure (2024 Q3)

Shinhan Bank Canada Mortgage Loans are available to purchase residential properties, refinance, or renovate existing residential properties. Typically, a minimum of 20% of the purchase price or appraisal value is required for the down payment. In other words, a maximum of 80% of the purchase price or appraisal value, whichever is lower, can be borrowed from Shinhan Bank Canada (the “Bank”). This particular type of mortgage is called a “Conventional Mortgage” and does not require mortgage insurance. Meanwhile, a “High Ratio Mortgage” refers to a mortgage in which the borrower has a down payment of less than 20% of the purchase value. A high ratio mortgage requires mortgage default insurance from CMHC or Genworth Canada, etc. **Currently, the Bank only provides Conventional Residential Mortgage Loans.**

For the greater transparency, clarity and public confidence in the Bank’s residential mortgage portfolio, the Bank prepared the Residential Mortgage Disclosure for the third quarter of 2024.

GDS (Gross Debt Service Ratio): It is the percentage of gross income required to cover principal, interest and property tax payments. It is calculated by dividing the total annual payments of principal, interest and taxes by the defined gross annual income.

$$GDS = (\text{Principal} + \text{Interest} + \text{Property Taxes} + \text{Utility Costs}) / \text{Gross Income}$$

TDS (Total Debt Service Ratio): It is the percentage of defined income necessary to cover principal, interest and property tax payments, maintenance fees (if applicable) plus all other payments. It is calculated by taking the total principal, interest and tax payments used in the GDS calculation, adding all annual payments required for installment accounts and dividing by the total gross income.

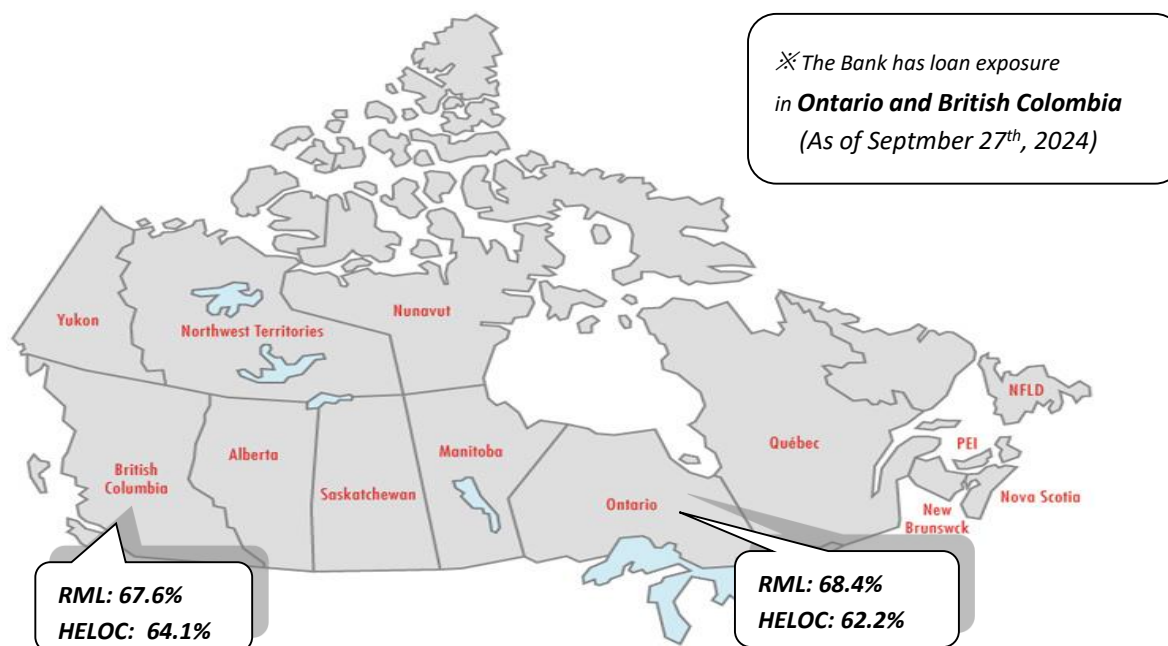

$$TDS = (\text{Principal} + \text{Interest} + \text{Property Taxes} + \text{Utility Cost} + \text{All other annual debt payments}) / \text{Gross Income}$$

5. The potential Impact on Residential Mortgage Loans and HELOCs in the Event of an Economic Downturn

The Bank regularly performs stress test our portfolio to assess possible impact upon economic downturn. The test uses variables in a range that is more conservative compared to historical data from past economic downturn events in Canada. These severe stress scenarios are then used to model potential outcomes such as potential loan losses, revenue loss and impact on the Bank's capital. The results show that Shinhan is in a strong capital position to absorb mortgages and HELOC losses in an economic and housing price downturns.
